Electrostatic Discharge

静电放电

Before touching the device, or holding the boards and IC chips, wear the ESD gloves or the ESD wrist strap (Ensure that the other end of the ESD wrist strap is well grounded.) to prevent the electrostatic discharge of the human body from damaging the sensitive components.

在接触设备，手拿单板或IC芯片等操作之前，为防止人体的静电损坏敏感元件，必须佩戴防静电手套或防静电腕带（确保防静电腕带的另一端接地良好）。

Bundling cables

捆绑电缆

The distance between cable ties for all cables outside the cabinet is determined according to the distance between two horizontal beams. For the cabling trough without beams, bundle the cables with the distance not exceeding 250 mm between cable ties.

室外机盒所有线缆的线扣绑扎距离以两横梁之间的间距为准，没有横梁的走线槽按照不超过250mm的间距进行绑扎。

Affixing labels / tags

粘贴标签

- After routing the cable, affix the label or fasten the tag to the cable, and 20 mm away from the connector.
电缆布线后，距离电缆连接器20mm处贴上标签或固定标签。
- When the signal cable is placed vertically, the label should point towards the right. When the cable is placed horizontally, the label should point downwards. After bundling the cables, the completed identification plate should be visible on the top of the cable in the horizontal cabling, or on the right side of the cable in the vertical cabling. Make sure that the label points outwards.
信号电缆垂直布线时，标签指向右边；电缆水平布线时，标签指向下方。电缆捆绑后，最终的识别牌，在水平布线时卷缆柱的上方或在垂直布线时卷缆柱的右边可见。确保标签向外。

Equipment protection grade

设备防护等级

If the network cabinet is installed outdoors or in a corridor that is exposed to rain, the network cabinet must meet the requirements of IP55 class protection. ("IP" refers to International Protection. The first number "5" refers to the class for preventing the solid particle from entering the device. That is, the network cabinet cannot completely prevent dust from entering the device, but the amount of dust that enters the network cabinet does not damage the device. The second number "5" refers to the class for preventing water from entering the network cabinet. That is, the water sprayed from different directions to the network cabinet does not damage the device.

在室外或易被雨水淋到的楼道环境中安装的网络箱必须达到IP55等级（“IP”为国际防护等级；第一个数字“5”为防外部固体颗粒侵入等级，即“网络箱不可能完全阻止灰尘进入，但灰尘进入的数量不会对设备造成损害”；第二个数字“5”为防水侵入等级，即“从每个方向对准网络箱柜体的射水都不会对设备造成损害”）。
